

**RENCANA PEMBELAJARAN SEMESTER
PROGRAM STUDI TEKNIK INFORMATIKA DAN KOMPUTER
PROGRAM PASCASARJANA S2 TERAPAN**

Kode	VI202204	Mata Kuliah	Prak. Komunikasi Data Lanjut
Bobot SKS	1	Semester	1
Kelompok MK	MK Konsentrasi (Concentration Lecture)	Jam/minggu	3
Tim Pengampu MK	Amang Sudarsono dan Mike Yuliana		Nold: RF-DTEL-PSTE-4.05.Rev.01[031]

Capaian Pembelajaran	Students will develop knowledge and skills in advanced data communication. At the conclusion of the course, students will be able to:
	<ol style="list-style-type: none"> 1. Understand how data is communicated through various communication technologies. 2. Understand why data and signal related each other how it is dealt with. 3. Understand transmission impairments, data rate limits, and performance of transmission systems. 4. Understand error detection and correction, and their various methods. 5. Understand digital transmission, its conversions and transmission modes. 6. Understand data link control, forwarding packet and routing. 7. Design and implement communication software using client/server model. 8. Implement communication protocols from a given specification.

Pokok Bahasan	This course focuses on the principles of computer networks using current Internet technologies and protocols as examples. Topics include:
	<ol style="list-style-type: none"> 1. Fundamentals of data communication technologies. 2. Data and signal including analog and digital. 3. Transmission impairments, data rate limits, and performance of transmission systems. 4. Methods/Algorithms of error detection and correction. 5. Digital transmission, conversions and transmission modes. 6. Data link control, forwarding packet and routing. 7. Implementation of data communication through client/server model. 8. Implementation of communication protocols.
